- Incidents are handled randomly
- No clear accountability
- Poor communication between IT and business

ITIL brings **structure, clarity, and accountability**.

Key Concepts / Core Points
1. Service
A way of delivering value to customers without them managing specific costs and risks.
2. IT Service Management (ITSM)
Managing IT services through defined processes.
3. ITIL 4 Service Value System (SVS)
Describes how all components work together to create value.
SVS Components:
- Guiding Principles
- Governance
- Service Value Chain
- Practices
- Continual Improvement

---

4. Four Dimensions of Service Management
ITIL 4 is based on 4 dimensions:
1. Organizations & People
2. Information & Technology
3. Partners & Suppliers
4. Value Streams & Processes

All four must be balanced for successful service delivery.

ITIL 4 replaced “processes” with “practices”.
Important practices:
- Incident Management
- Problem Management
- Change Enablement
- Service Desk

- Service Level Management
- Configuration Management

Real-Time Example

Company: Banking Application Support Team

If customers cannot log in to mobile banking:

- User reports issue → Service Desk logs incident
- Incident team resolves issue
- If root cause unknown → Problem Management investigates
- If code change needed → Change Enablement process followed
- After resolution → Service restored

This structured flow is based on ITIL practices.
